

NATURAL SELECTION

(chorus)

NATURAL SELECTION IS THE PROCESS
BY WHICH ORGANISMS MORE ADAPTED
TO THEIR ENVIRONMENT ARE MORE LIKELY
TO SURVIVE AND REPRODUCE WHILE OTHERS DIE OFF
NATURAL SELECTION IS THE PROCESS
BY WHICH ORGANISMS MORE ADAPTED
TO THEIR ENVIRONMENT ARE MORE LIKELY
TO SURVIVE AND REPRODUCE WHILE OTHERS DIE OFF

(verse)

SINCE DARWIN AND ALFRED RUSSELL WALLACE
CAME UP WITH AN EXPLANATION
OF HOW EVOLUTION HAPPENS
ITS CALLED NATURAL SELECTION
NOW THERES A FEW THINGS THAT EFFECT THE PROCESS
OVER PRODUCTION AND COMPETITION
IN OVER PRODUCTION TOO MANY OFFSPRINGS ARE BORN
THERES NOT ENOUGH FOOD, WATER, SPACE, RESOURCES
WITH COMPETITION ITS ALL ABOUT SURVIVAL
SOME MIGHT NOT LIVE LONG ENOUGH TO REPRODUCE
WITH COMPETITION ITS ALL ABOUT SURVIVAL
SOME MIGHT NOT LIVE LONG ENOUGH TO REPRODUCE
